2300E
Digital Load Sharing and Speed Control Hardware

Description

The 2300 Digital Electronic Load Sharing & Speed Control is a microprocessor-based hardware platform that is custom programmable to the specific needs of the application. Typically the control is used to provide speed and load control functions for reciprocating engines, or steam or gas turbines. The control consists of a single printed circuit board that is housed in a sheet-metal enclosure. Both ordinary and hazardous location versions are available. The unit is intended for bulkhead mounting, and spring-loaded terminal blocks are provided for termination of field wiring. The 2300E is powered from 24 Vdc.

Integral load sensor and load sharing capabilities are available that allow the control to be programmed for a variety of power generation applications. Isochronous load sharing, kW droop, and base-load operation can be provided.

The 2300 input/output (I/O) list includes:
- 1 Generator Load Sensor
- 3 PT Inputs & 3 CT Inputs
- 1 Load Sharing Line
- 1 Actuator Driver Output
- 2 Magnetic Pickup (MPU) Inputs
- 1 Analog Output
- 2 Analog Inputs
- 8 Discrete Inputs
- 4 Discrete Relay Driver Outputs or PWM Outputs (on skid)
- 1 Serial COM Port (RS-232)
- 1 Serial COM Port (RS-422)
- 1 CAN Port

The operating temperature range is –40 to +70 °C (–40 to +158 °F), and the 2300 is CE Marked and UL/CSA Listed.

Programming

Woodward GAP™ Software is used to program the 2300E. Specialized functions are programmed to meet the specific needs for speed control, load management, process control, unit sequencing, and protective monitoring. If desired, the 2300E can be programmed to handle supervisory functions rather than individual unit control.

Communications

Two 9-pin sub D connectors are available to allow RS-232 and RS-422 serial communications with other systems at baud rates up to 115,200 BPS. The RS-422 port is used to interface with the plant DCS, an operator HMI, or printers and data loggers. The port’s Modbus® communications characteristics are defined in the customized application program.

In addition, the RS-232 port can be used to configure and service the controller by use of the Woodward Control Assistant software or Woodward ToolKit software. These software programs allow users to set and adjust all application-based parameters, plus upload and download configurations to and from the control.

**Regulatory Compliance**

**NOTE**

Some certifications apply to specific models only.

**European Compliance for CE Mark:**
- **Low Voltage Directive:** Declared to 2006/95/EC COUNCIL DIRECTIVE of 12 December 2006 on the harmonization of the laws of Member States relating to electrical equipment designed for use within certain voltage limits.

- Zone 2, Category 3, Group II G, Ex nA IIC T3 Gc X
- Zone 2, Category 3, Group II G, Ex nA IIC T4 Gc X

**Marine Compliance:**
- **Det Norske Veritas:** Standard for Certification, No. 2.4, April 2006
- **Lloyd’s Register of Shipping:** Type Approval System, Test Specification Number 1, 2002
- **American Bureau of Shipping:** 2009 Steel Vessels Rules 1-1-4/7.7, 4-2-1/7.3 & 7.5

**North American Compliance:**
- **CSA:** CSA Certified for Class I, Division 2, Groups A, B, C, D, T3 or T4, and Ordinary Locations for use in Canada and the United States.

**NOTE**

Wiring must be in accordance with applicable electric codes with the authority having jurisdiction. These listings are limited to those units bearing the UL or CSA agency identification.
