The GTC190A-FC is specifically designed to control large industrial single-shaft frame gas turbines. It includes field-proven frame gas turbine fuel control algorithms for single- or dual-fuel turbines used in generator drive or mechanical drive applications. Speed, load, and temperature algorithms maintain precise fuel control within the turbine's operating limits over the entire range of turbine operation, as well as during unforeseen operational disturbances, to provide safe, reliable gas turbine system control. The controller's special PID-to-PID transfer logic allows stable control during normal operations and bumpless control mode transfers during plant upsets, minimizing process over- or undershoot conditions. The unit's environmental specifications allow it to be mounted close to the turbine package for increased critical control signal reliability.

The GTC190A-FC is designed to be a Fuel Control (FC) only, and can interface directly to the gas turbine's sequencing logic performed elsewhere.

Field-configurable and ideal for retrofits, the GTC190A-FC provides users with a low-risk fuel control that allows them to benefit from its well tested frame gas turbine algorithms and hardware.

**Description**

The GTC190A-FC is built on Woodward's industrial-hardened Atlas-II™ platform, and include a standard, field-configurable, core fuel control system that controls turbine speed, load, start ramp, temperature, fuel valve position, and fuel transfers for dual-fuel applications.

The GTC190A-FC contains standard core engine control functions, which are protected, but can be configured with site-specific values using the included graphical configuration software service tool. This control is designed to provide the confidence of a field-proven core fuel control that interfaces directly to site-specific functions contained in PLC or DCS systems through hardwired connections or Modbus® * ports.

Woodward's service interface software tools allow the user to easily view and tune system variables. Data logging files are included to facilitate troubleshooting, and non-volatile counter/timer files keep track of starts, fired hours, and other useful data.

The hardware lends itself to bulkhead mounting. Environmental specifications allow the GTC190A-FC to move out of the control room and closer to the prime mover. In many cases, they can be mounted on the prime mover skid. Typically, they are mounted in an enclosure rated for the site-specific environmental conditions. A variety of computational and I/O signals are available to meet the specific needs of the application. Internally, the configuration of the printed circuit board stacks eliminates the need for a motherboard; reducing overall cost. Wiring terminations are provided on the top and bottom edges of the printed circuit boards by means of quick disconnect plug and socket connectors. Control power is supplied from an external 24 Vdc source.

---

*Modbus is a trademark of Schneider Automation Inc.
**Functionality**

**Core Fuel Control**
- Start fuel ramp
- Single-shaft speed sensing (w/ redundant probes, up to 4)
- Speed derivative (acceleration) control
- Speed control
- Remote speed reference logic
- Load control
- Exhaust gas temperature (EGT) monitoring (1–18 T/C inputs)
  - Use of all T/Cs, including protection T/Cs
  - Auto rejection with deviation from average spread
  - Highest and lowest EGT T/C
- EGT limiting control
- EGT derivative control
- Ambient temperature sensing
- Compressor discharge pressure (CDP or PCD) sensing
- Flame detection logic (temp, discrete in, or analog in)
- MW load limiting control (selectable)
- Single-fuel or dual-fuel operation with fuel transfer logic
- Overspeed detection/protection

**Optimized On-board I/O**
- High-speed and deterministic update times
- High CMRR and control-specific filtering result in high degree of noise immunity
- 15 bit resolution differential inputs, allowing very precise control
- I/O is accurate across temperature range
- I/O is isolated in groups to prevent ground loops and other induced noise issues
- Serial RS-232, RS-422, or RS-485
- CANopen
- Ethernet (10/100 MBaud)

**Fuel Valve Interfacing**
- Direct to Woodward’s standard valve offerings using CANopen
- Via Woodward’s SPC Servo Position Controller to most existing systems for integrating actuators
- Configurable 4–20 or 0–20 mA proportional drivers (2)

**Communications Protocols**
- Modbus (RTU and ASCII) over serial or Ethernet
- Ethernet TCP/IP
- Ethernet UDP/IP
- CANopen
- OPC DA 3.0 and AE 1.0

Engineering and Service Access

Woodward's software service tools provide service personnel with extensive monitoring and troubleshooting for the GTC190A-FC. The service tools provide operational and analytical information such as graphical display of operating data, data logging (at rate group resolution), trending, event logging, X-Y plotting, and other features.

The following software tools come standard with the GTC190A-FC:
- Graphical Interface Software Configuration Tool—Ethernet access to allow unit configuration, calibration, and setup.
- Application Manager and Other Engineering Interface Tools—Ethernet access to the control for program loading, network configuration and support, and system diagnostics

Other useful software tools (licensing required):
- Control Assistant—Ethernet connection to Windows-based viewing of high-speed data log captures and other useful utilities; including trending, tunable maintenance.

Analog Input/Output per Module (2 modules)
- 2 MPU speed pickups
- 2 RTD (100 or 200 ohm, 3 wire) 4–20 mA inputs (software selectable)
- 10 thermocouple (E, J, K, N, R, S, T)
- 3 analog inputs (4–20 mA)
- 2 analog outputs (4–20 mA)
- On-board cold junction sensor

Regulatory Compliance

North American:

UL: UL Listed for Class I, Division 2, Groups A, B, C, and D, T3C at 70 °C surrounding air temperature. For use in Canada and the United States.
UL File E156028

European Compliance for CE Marking:

- Low Voltage Directive: 2006/95/EC
- ATEX Directive: 94/9/EC (Zone 2, Cat. 3, Group II G, Ex na IIC T3 X)

Marine Compliance

Models are available that are suitable for marine applications.

ABS: ABS Rules 2006 SVR 4-2-1/7.3, 7.5.1, 7.9.3/174-9-7/Table 9
LRS: Test Specification No. 1, 2002: ENV1, ENV2, and ENV3

Environmental Specifications

Skid Mount Packaging
- Operating temperature: –20 to +70 °C (+60 °C w/ Profibus in GTC190A-TC)
- Storage temperature: –40 to +85 °C
- Vibration: Lloyds Test Specification No. 1, 2002, Vibration Test 1 (5–13.2 Hz, ±1 mm; 13.2–100 Hz, ±0.7 g)
- Shock: US MIL-STD-810C, 516.2-2 (30 g, 11 ms, 1/2 sine)
- Marine Type Approvals: ABS, DNV, LRS
