Description

The Woodward UG-25+ governor is a microprocessor-controlled, mechanical-hydraulic amplified, governor for controlling diesel, gas, and dual fuel engines, and steam turbines.

Enhanced control capabilities, such as start fuel and boost limiting schemes, are an integral part of the UG-25+ governor. The additional transient fuel limiting (jump-rate) improves the engine load acceptance and reduces transient emissions significantly.

This fast-acting, high-work-output governor has no need for any auxiliary devices such as a start booster or oil cooler. Two work output versions are available.

The UG-25+ offers speed control with software-selectable speed set points, dynamics, fuel limiting, and start behavior. All it takes is a PC to adjust and download configuration data.

Front panel and external speed settings make synchronization and load sharing easy for generator applications. A 4 mA to 20 mA speed setting is available for variable speed applications.

Adjustable droop permits load division and balancing among parallel operated prime movers. Droop can be set with a knob on the front panel between 0–10. The load limiter knob allows you to limit the governor output manually.

The UG-25+ uses a 1034 kPa (150 psi) internal operating pressure with an internal oil pump driven from the governor's drive shaft, available in either a keyed or serrated configuration. Oil pressure is maintained by a relief valve system with a drain to an internal oil sump.

Control features:
- State-of-the-art speed sensing and control algorithms
- Enhanced PID dynamics
- Configurable speed settings and adjustment rates
- Multiple fuel limiting algorithms, such as jump-rate, boost pressure, and start fuel limiting
- Comprehensive diagnostics for easy troubleshooting

The UG-25+ is a drop-in replacement for UG-8 and 3161 governors and combines all the advantages of a traditional mechanical governor with the state-of-the-art control algorithms for optimal engine operation.
Specifications

Governor

Power Supply (18 to 32) V (dc), dual inputs
Power Consumption Reverse polarity protection, 32 W max

Torque/Work Output (minimum):

<table>
<thead>
<tr>
<th>Version</th>
<th>Torque/Work Output</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard Version</td>
<td>45.4 N·m (33.5 lb-ft) torque; 32.9 J (24.3 ft-lb) of work over 42 degrees</td>
</tr>
<tr>
<td>Increased Output Version</td>
<td>55.5 N·m (40.9 lb-ft) torque; 40.2 J (29.6 ft-lb) of work over 42 degrees</td>
</tr>
</tbody>
</table>

Max. Continuous Speed

- 1700 rpm (gov. shaft) max (small pump)
- 1200 rpm (gov. shaft) max (large pump)

Hysteresis

1.0 % or less (measured over full terminal shaft travel)

Temperature Drift

1.0 % of full terminal shaft travel between 27 °C and 77 °C (80 °F and 170 °F)

Linearity

2.5 % or less (measured over full terminal shaft travel)

Ramp-up Rate

Configurable from 0.2 to 200 rpm/s (gov. shaft)

Steady State Speed Band

±0.25% of rated speed (under normal operating conditions)

Weight

28 kg (62 lb), dry weight

Customer Connections

Terminal blocks located inside front access plate

Governor Drive / Hydraulic System

Input Shaft Options

0.625 keyed drive shaft with 0.625-18 threads or 0.625-36 serrated

Output

42.2 ± 0.6 degrees rotary

Terminal Shaft Options

0.625-36 serration (standard), 0.750-36 serration (increased output version)

Drive Power Requirement

335 W (0.45 hp) max.

Internal Hydraulic Pressure

1034 kPa (150 psi)

Oil

Self-contained sump (2.1 L / 2.2 quart capacity). See Woodward Manual 25071, Oils for Hydraulic Controls, for oil recommendations.

Drive Speed

Available with either high or low speed pump

- High-speed pump: 500 rpm to 1700 rpm (gov. shaft)
- Low Speed pump: 350 rpm to 1200 rpm (gov. shaft)

Drive Rotation

Pump can be configured to operate in CW or CCW direction

Functions

Function Options

Start Fuel Limiter; Adjustable Max Fuel Stop; Jump and Rate Limiter; Position-based Gain curve; Manifold Air Pressure Biased Fuel Limiter, Analog set-point rate limit; separate Raise and Lower Rates; Start Gain

Programming Port

Programmable with Windows GUI software and harness

I/O

4 mA to 20 mA analog speed setting; Analog Speed Set-point selector Raise, Lower, and Stop discrete inputs

Analog Speed Set Enable discrete input

4 mA to 20 mA boost fuel limiter input; Boost Input selector

Unit Healthy discrete out

Front Panel Functions

Raise and Lower speed set-point commands

Stop command; Droop adjustment; Stability adjustment, Fuel-Limit adjustment

Front Panel Indications

Unit Healthy status indication, Speed Set-point mode indications (Raise/Lower or Analog)

Regulatory Compliance

European Compliance for CE Marking:

- **EMC Directive:** 2004/108/EC

Other European Compliance:

(Compliance with the following European Directives or standards does not qualify this product for application of the CE Marking)

- **Machinery Directive:** Compliant as partly completed machinery per 2006/42/EC
- **Pressure Equipment Directive:** Compliant as “SEP” per Article 3.3 to 97/23/EC

Marine Compliance:

Models are available that are suitable for marine applications. Contact your sales representative for more information.

Technical Manual 26579
